Transition from metal to polymer handle that would be more ergonomic and provide:

- Scratch and chemical resistance
- Impact resistance and durability
- A grippy, soft-touch feel

Collaborated with the customer to fully understand and meet their design challenges and goals

Used design and material expertise to develop a customized two-material solution that met all key requirements

Enabled the customer to produce a new, innovative product appealing to its consumers

Bergamid™ Nylon Copolymer overmolded with GLS™ TPE
